

13. Dependent on the amended claim 37, please reexamine the dependent claims 38-40, and claim 44.
14. The conditionally allowable claim 42 as you indicated is rewritten in an independent form. Please consider allowing it.
15. The conditionally allowable claim 43 as you indicated is rewritten in an independent form. Please consider allowing it.
16. Regarding Claim 45, reading throughout the reference document US-2004/0266457, it is found that it does not teach a functional element that is equivalent to the "guiding and reference device" in my application. The referenced "MBS 148" is in some way similar to the movable detection station 30 in my application, the referenced "MS 140" is equivalent to the "target wireless transmitting device 10" in my application, and no elements in the reference document US-2004/0266457 was found similar to the "guiding and reference device 100", and no elements in the referenced document performs the functionalities claimed in the allowed method claims 15-36, such as equipped to a rescuer as handheld guiding device, a reference transmitter that transmits wireless signals using radio properties similar to that of the target wireless transmitting device, being position determined together with the target wireless transmitting device, and displaying its location relative to that of the targeting wireless transmitting device while approaching the target wireless transmitting device, etc. Thus, the claim 45 has been amended to specify these features. Please examine the amended claim 45.
17. Please also further examine the dependent claims (i.e., the claims 46-47) that are dependent upon the revised claim 45.

Regards,

Sincerely,

  
Hang Liu
